

Public and Commercial Pools

The Weda W2000 is a flexible pool vacuum cleaner with high cleaning capacity and rotating brushes. It can be fitted with a simple filter bag or an effluent hose to pump away any sediment to the drain or the pool's filter system. This is often used for more extensive cleaning when, for example, you want to quickly remove something from the bottom. Safe power supply with a safety transformer for 42V for all variants.

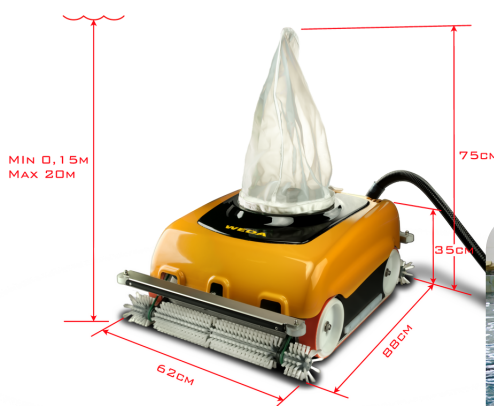

It allows for the programming of individual cleaning patterns for up to three pools. One of our technicians can help with the setup if desired. It is otherwise always possible to operate the pool cleaner manually with the remote control.
